Foreword

The Virginia Crop Improvement Association (VCIA) is a nonprofit educational and service organization officially recognized as the seed certifying agency in Virginia for maintaining varietal identity and mechanical purity of improved crops. Certification is a system of records, inspections, and standards conducted with the cooperation and supervision of seed growers, seedsmen, the Extension and Research Division of VA Tech, the Virginia Department of Agriculture and Consumer Services, and the Virginia Certified Seed Board. VCIA is a member of the Association of Official Seed Certifying Agencies (AOSCA), an organization composed of agencies responsible for seed certification in the United States, Canada, and several other countries.

Notice to Buyers

The crops listed in this book represent those approved at the field inspection level. Final certification is not complete until after a representative and cleaned seed sample has passed a complete laboratory analysis. All inquiries and purchases of certified seed should be made directly from the producers listed in this directory. It is the producer's responsibility to supply seed representative of the seed submitted and approved for certification by the VCIA. It is recommended that the buyer examine the seed and analysis tag before all seed is purchased. **All seed sold as certified seed must have an official certified tag attached or it is not certified seed.**

The VCIA can assume no financial responsibility for seed listed in this directory or for disagreements over sales which may arise from this list. However, any seed purchased or delivered not meeting certification standards should be brought to the attention of the Secretary-Treasurer of the Association.

Variety descriptions contained in this Directory are based on research information available at the time of release. For the most current updates on disease resistance, please refer to the Cooperative Extension Publications, the Virginia Tech Website (www@vt.edu), or private company variety information.

Plant Variety Protection Act

The following varieties have either been applied for protection or are protected under the U.S. Plant Variety Protection Act (PVPA). The PVPA provides the owner of the variety the exclusive right to reproduce and market the variety. Any person who sells uncertified seed of varieties covered by PVP, Title V, of the Federal Seed Act is breaking Federal and State law. "Unauthorized Propagation is Prohibited" for the following varieties listed in this directory:

Bailey Peanut Variety Description

Bailey is a Virginia type peanut with a flavor profile similar to the runner type flavor standard Florunner. Its characteristics include an alternate branching pattern, medium green foliage, and an intermediate runner growth habit. The Bailey peanut produces a medium Virginia type seed and a high content of fancy pods. Studies have indicated that it is partially resistant to early leafspot, *Cylindrocladium* black rot, *Sclerotinia* blight, and tomato spotted wilt virus.

Champs Peanut Variety Description

Champs was released by Virginia Tech Intellectual Properties, Inc. in 2004. It is an early maturing Virginia-type peanut. Plant growth type is similar to NC-V11 and VA 98R. *Sclerotinia* blight resistance is similar to VA 98R and Wilson. Resistance to tomato-spotted wilt virus is similar to NC-V11. Resistance to *cylindrocladium* black rot and web blotch is good.

Georgia 08V Peanut Variety Description

U. S. Variety Protection Applied For

Georgia 08V is a new high-oleic, large-seeded, Virginia type peanut cultivar. It has prostrate growth habit with spreading runner growth habit, medium maturity, and a high level of resistance to tomato spotted wilt virus. (TSWV). Georgia 08V is similar to NC-V11. It was found to be among the lowest in disease incidence, highest in pod yield, ELK grade, and largest in seed size, compared to the current leading Virginia type cultivars. It has good stability and a wide range of adaptability, especially in the V-C region, where Virginia types are predominantly grown.

Gregory Peanut Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified seed

Gregory is a Virginia type peanut variety released by the North Carolina Agricultural Research Service. Its growth habit is intermediate between bunch and runner and has large seeds with pink testa. Gregory has larger pods and seeds than the largest Virginia type varieties currently available. Gregory was derived from a cross of NC 7 and NC 9. Gregory is similar to NC 7 in being susceptible to early leaf spot, *Cylindrocladium* black rot, Southern stem rot, and *Sclerotinia* blight. In comparison with NC 7, Gregory has more fancy size pods, more extra large kernels, fewer sound mature kernels, lower meat content, higher pod yield and higher value per acre.

NC-V11 Peanut Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified seed

NC-V11 was released jointly by the North Carolina Agricultural Research Service, the Virginia Agricultural Experiment Station, and USDA-ARS. It is a selection of two particular selections of Florigiant x NC 5 and Florigiant x PI 337396. Plants have a runner growth habit and are similar to Florigiant in appearance.

Perry Peanut Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified seed

Perry was released by the North Carolina Agricultural Research Service. This Virginia-type peanut variety has a high level of resistance to *Cylindrocladium* black rot (CBR) partial resistance to *Sclerotinia* blight and some field resistance to tomato spotted wilt virus. Perry has alternate branching pattern, runner growth habit, dark green foliage, and large seeds with pink testa.

Phillips Peanut Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified seed

Phillips was released by the North Carolina Agricultural Research Service in 2005. It is a Virginia-type peanut with a large amount of bright fancy pods. It has alternate branching pattern, intermediate runner growth habit, medium green foliage, large seeds with tan testa, about 34% jumbo pods and 45% fancy pods. Maturity is similar to Gregory. Based upon other varieties and evaluation in 1999 - 2003, Phillips performed similar to NC 12C and Perry for reaction to early leaf spot. It performed similar to NC 12C and Perry for reaction to *Cylindrocladium* black rot. Phillips is susceptible to *Sclerotinia* blight. Reaction due to tomato spotted wilt virus is similar to NC-V11; less tolerant than Gregory.

VA 98R Peanut Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified seed

VA 98R is a large seeded Virginia type peanut variety released by Virginia Tech. It has a runner growth habit and a prominent main stem. VA 98R has two characteristics that are highly desired by the peanut industry; a pink seed coat and excellent pod characteristics which include bright color, shape, and size. VA 98R is considered as early maturing with excellent yield potential and grade characteristics, even when dug at a September 15 harvest date. Data from Virginia early maturity tests show VA 98R to have yield and dollar value superior to VA 93B, NC 7, and VA-C92R. Grade data show fancy pod percentages of VA 98R lower than NC 7, but equal to VA-C92R.

Glenn Soybean Variety Description

U. S. Variety Protection Applied For

Glenn is a high-yielding 5.5 conventional line soybean developed by Virginia Tech that does particularly well in double-crop plantings. It has white flowers and tawny pubescence. It has been extensively tested in yield trials throughout the region. It is of medium height, a semi-bushy plant with great lodging resistance. It has excellent shatter resistance and is resistant to Stem Canker, Soybean Mosaic Virus, and moderately resistant to Frogeye Leaf Spot and Sudden Death Syndrome.

Hutcheson Soybean Variety Description

Hutcheson is a Group 5 variety developed by Virginia Tech and released in 1987. It has white flowers, gray pubescence, and buff hila. Hutcheson is resistant to soybean mosaic virus, peanut stunt virus, and stem canker. Hutcheson has proven to be widely adapted throughout the Group 5 soybean belt.

MFL-159 Soybean Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified seed

MFL-159 is a Group 5 variety, maturing about two days later than Hutcheson. Plant height averages about 31 inches which is about half an inch shorter than Hutcheson. MFL-159 has white flowers, gray pubescence, tan pods, yellow seed coats, and buff hila. Leaflet shape is ovate. Plants have the determinate growth habit. It is resistant to soybean mosaic virus. It is susceptible to soybean cyst nematode, so probably would not do well in infested fields.

MFS-541 Soybean Variety Description

MFS-541 has purple flowers, gray pubescence, brown pods, yellow seed coats, and yellow hila. Mean height is 32.4 inches. It is a small seeded cultivar suitable for the manufacture of natto and is superior in yield and maturity to MS-591. It is more stable for water absorption over environments, a trait valued by natto manufacturers. It has acceptable quality characteristics and has stable performance for quality from year to year. It is generally adapted to all areas in Virginia where soybeans are grown. Yields are less than standard cultivars, but premium prices are paid for natto soybeans.

MFS-591 Soybean Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified seed

MFS-591 is a small-seeded maturity Group 5 variety, maturing about one day later than Hutcheson. It has purple flowers, gray pubescence, tan pods, yellow seed coats, and buff hilum. Leaflet shape is ovate and plants have the determinate growth habit. Plant height averages about 27 inches, which is about two inches shorter than Hutcheson.

Prohio Soybean Variety Description

Prohio is an early maturity soybean cultivar that was developed jointly by the USDA-Agricultural Research Service and The Ohio Agricultural Research and Development Center in Wooster, Ohio, and was released as a high-protein high-yielding maturity Group IV, non-Roundup Ready® cultivar in December 2006. The interesting aspect of this line is its high protein content. It has a moderate level of partial resistance against Psojæ. It has purple flowers, tawny pubescence, tan pods, with black hilum. No application for U.S. Plant Variety Protection will be made for Prohio.

Tyrone Soybean Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified seed

Tyrone is a Group 7 variety with superior forage yielding ability and is not intended for grain production. In replicate 1994, 1995, and 1996 trials in Orange, VA, Tyrone produced an average of 8 percent more total dry matter per acre than the adapted grain type soybean, Hutcheson (3.8 tons versus 3.5 tons). Tyrone is exceptionally tall, late maturing cultivar with high forage yield potential and moderate resistance to lodging. It is recommended for forage production in the southern states. Tyrone has white flowers and grey pubescence. Seeds are yellow with shiny seed coat luster and brown hila. It is resistant to bacterial pustule, moderately resistant to downy mildew, susceptible to soybean cyst nematode and southern stem canker disease.

Virginia Quality Assurance Program

The following companies and seed enterprises have requested field inspection of their proprietary branded products under the VCIA Quality Assurance Program. Participation in this program demonstrates these companies efforts to use effective quality management in seed production and conditioning. This program provides an unbiased assessment and verification of key seed quality factors affecting seed performance. For more information about the Quality Assurance Program contact the VCIA. For further details about the products offered by these companies, contact them directly.

TURFGRASS SOD VARIETY DESCRIPTIONS

Patriot Bermudagrass Variety Description

Patented

Patriot was developed by the Oklahoma State University Bermudagrass Breeding and Development Team. In the upper region of bermudagrass adaptation where cold winters are an issue, the overall quality of Patriot is usually equal to or better than that of Tifway. This low temperature-hardy variety establishes rapidly from sprigs and has improved resistance to spring dead spot. Excellent aerial shoot survival during winter, relatively short internodes and high shoot density may result in a need for routine de-thatching under intensive management.

Riviera Bermudagrass Variety Description

U. S. Protected Variety

Can be sold only as a class of Certified Seed

Riviera is a synthetic variety developed from three parental plants and released by the Oklahoma Agricultural Experiment Station with an exclusive license to Johnston Seed Company, Enid, OK. Riviera produces a moderately fine-textured, medium dark green turf with excellent turf quality. It appears to have adequate resistance or tolerance to the major pests of bermudagrass, particularly in the U.S. transition zone. It is sufficiently cold-hardy to be used in parts of the U. S. transition zone between warm-season and cool-season turfgrasses with minimal risk. Commercial plants of Riviera must be established by planting either certified seed or certified sod (or sprigs). Certified seed is synthetic one generation seed harvested from a field planted to approximately equal quantities of foundation (or breeder) sprigs of the three parental clones. Certified sod (or sprigs) must be produced from a field planted with foundation seed.

Sovereign Bermudagrass Variety Description

Sovereign solves the dilemma when planting a warm season grass in the upper transition zone. It alleviates the concern regarding lack of cold tolerance. The thriving germplasm selected in Northern KY when breeding Sovereign ensures the utmost tolerance to the elements. The fine texture and bright green color, and aggressive growth satisfy all turf managers. It has brilliant overall turf quality, excellent winter hardiness, superb drought tolerance, vigorous establishment from seed, and superlative wear tolerance. It is recommended for golf course tees, fairways, and roughs, Sovereign is also recommended for sports fields, parks, and utility fields, and lawns. Reduced water applications trim overall management cost.

Tifway (419) Bermudagrass Variety Description

Tifway (419) was selected and cooperatively tested by the USDA, the Georgia Coastal Plain Experiment Station, and the U.S. and Southern Golf Associations. Found in a seed lot of African bermudagrasses from Johannesburg, South Africa, in the Spring of 1954, this chance hybrid between African and common bermudagrass will shed no pollen and set no seed. The dark-green, disease-resistant variety spreads quickly, and is more resistant to sod webworm. Tifway was released to growers of certified sprigs in 1960.

Seed Conditioners

Following is a list of companies and individuals who condition Certified seed in Virginia

A

Avalon Farm/William H. Dawson, Jr.272 Sydnors Millpond Rd., Heathsville, VA 22473..... 804-366-3187

B

Birdsong Peanuts/Mark Simmons..... P. O. Box 1400, Suffolk, VA 23434..... 757-539-3224

Brodnax Seed Company/Sam Lambert..... Rt. 58 West, P.O. Box 97, Brodnax, VA 23920..... 434-729-9555

C

Carlton, J & D, Farms, Inc./David Carlton..... HCR 74, Box 456, Mattaponi, VA 23110..... 804-785-5197

F

Farmers Rest Farm, Inc./Arthur Duke..... 11801 Farmers Rest Road, Charles City, VA 23030..... 804-829-2316

VIRGINIA CROP IMPROVEMENT ASSOCIATION

*Providing Virginia Seedsmen With Quality Third Party Inspections For
Over 80 Years*

**Offering quality third party inspection and record keeping services in
the following areas:**

- *Traditional Certification Services
- *Quality Assurance Inspections for Private Lines and Brands
- *Herbicide Tolerant/Resistant Inspections
- *Identity Preserved Grain Inspections
- *Source Identified Inspections for Native Plants
- *Customized Inspection Programs to Match Company Needs

**Third party inspection programs provide you and your customers
with an assurance of quality and peace of mind.**
